Course search is connected to 205 unique retained records, with title/skill search and recorded provider/level filters. The interface distinguishes that index from the larger 8,370-course source catalogue.
The progress reader preserves old checked steps as Completed and supports the two other statuses. All 52 model/state checks pass, and both typechecks and the frontend build pass. I'm checking saved-progress migration and the pathway → course details → return flow in the browser next.
18 actions
The browser check confirmed that the old completed step survives migration, all three statuses persist correctly, and opening a course record returns to the original pathway without changing progress.
It also caught a small phone-layout overflow in the catalogue's source-count label. I'll fix that, then finish the remaining catalogue and SDG checks.
